## VENTILATION TUBES

### MATERIAL DESCRIPTIONS

#### Fluoroplastic >> FP / BL (blue) or FP / W (white)

Inert, biocompatible and very smooth. The rigid material facilitates tube insertion and its nonstick characteristics may reduce adhesion formation and/or clogging. Summit Medical uses only 100% certified virgin material.

#### Silicone Elastomer >> S / BL (blue)

Extremely soft, compliant and elastic material. It is easily manipulated, extremely lubricious, and allows vent tubes to be easily compressed for insertion or removal. Summit Medical uses 100% certified medical grade silicone resin.

#### Titanium E >> TT

One-half the weight of stainless steel with many of the same features and benefits. It has excellent biocompatibility, is extremely resistant to corrosion and attack by body fluids, its rigidity facilitates insertion and it is extremely durable. Summit Medical uses 100% certified ASTM F136-92 titanium.

### DIMENSIONS

Measurements are listed in millimeters (schematic example and KEY below). All ventilation tube dimensions are approximate and subject to manufacturing variances. All ventilation tubes are sterile, single-use unless otherwise noted.

KEY	(example)	A	B	C	D	E
